Evaluated User Flow

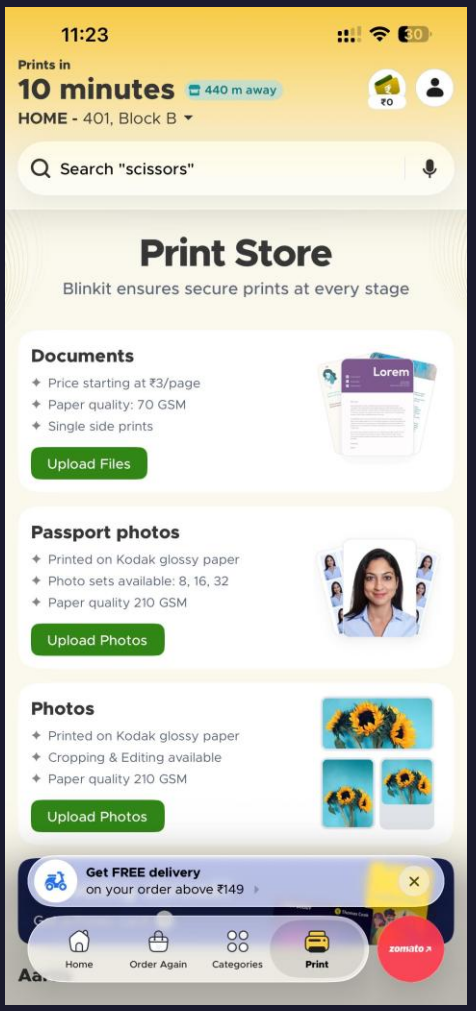

1 Browse — 2 Cart — 3 Checkout — 4 Payment — 5 Confirm

Heuristic Violated	Issue Identified	How to Improve
Visibility of System Status	• Out-of-stock item — no proactive alert • Delivery timer not visible during checkout	• Show a "Low stock" or "Out of stock" badge directly on the product card in the browse and cart views • Keep a persistent delivery estimate visible throughout checkout. Update it dynamically if the cart changes
Match Between the System and the Real World	• "Handling charge" — jargon, not real-world language • 1 item is not in stock • "2.26 lac" — unfamiliar unit for review counts	• Users don't use "handling charge" in everyday shopping. This is internal/logistics terminology. Real-world equivalent: "Packing fee" or "Service fee.“ • "Not in stock" is warehouse language. From the user's perspective, the item simply isn't available. The message should be outcome-oriented and empathetic, offering a clear next step. • keep Real-world convention in apps is "2,26,000 reviews" or "226K reviews."
User Control and Freedom	• No Undo Option After Removing Items from Cart • No Easy Exit from "Out of Stock" Substitution Flow • Coupon Application Has No Visible Undo	• Once reduced to zero, the item is gone with no way to quickly restore it. • Add a prominent "Remove & Continue" button alongside "Move to wishlist" so users can cleanly exit the substitution prompt without being forced into an alternative choice. • Place a small "Remove" or × inline next to the applied coupon on the bill details screen, so users can instantly undo coupon application without leaving the checkout page.
Consistency and Standards	Nil	
Error Prevention	Out-of-Stock Item shown in cart without upfront warning	Show a real-time "Out of Stock" badge on the product card before it's added to cart. Disable or replace the "Add" button with a "Notify me" option
Recognition Rather than Recall	Sweets & Chocolates grid has 12+ products with no smart sort/filter active by default	Default sort by "Popular" or "Offers". Enable personalized quick-filter tabs.
Flexibility and Efficiency of Use	The checkout flow has no saved quick-pay option visible upfront. Returning users must tap "Add payment method" each time	Show saved payment methods directly on the checkout screen for returning users
Aesthetic and Minimalist Design	The checkout page contains a donation prompt with an image, a GSTIN upsell banner, and delivery instruction icons all competing for attention	Move secondary elements (GSTIN, donation) below the fold or into a collapsible section.
Help Users Recognize, Diagnose, and Recover from Errors	The out-of-stock alert says "1 item is not in stock" but only suggests replacement products beneath it. There is no direct action to remove the item from the cart without hunting for it — the recovery path is unclear.	Add a prominent "Remove item" button directly inside the error banner, alongside the alternatives. The error message should explicitly say what the user needs to do: "Remove this item or choose a replacement to continue."
Help and Documentation	The Print Store (documents, passport photos) offers no guidance on accepted file formats, size limits, or turnaround expectations beyond basic bullet points. A first-time user has no clear path to get help if an upload fails.	Add a small "?" tooltip or "How it works" link near each print option that surfaces format requirements and a sample workflow. A brief FAQ or chat shortcut would reduce abandonment for users who hit an issue mid-upload.

UX LAWS MAPPING

Hick's Law

More choices = more decision time

Impact: High

Issue: The checkout page shows 6+ delivery instruction icons, a donation prompt, a GSTIN upsell, and a bill summary all at once, overwhelming the user before payment.

Fix: Reduce visible options to 3 essentials — bill summary, delivery address, pay button. Move everything else behind a collapsible "More options" link.

Design Principle

More choices = more decision time

Fitts's Law

Distant/small targets are harder to tap

Impact: High

Issue: The primary "Add payment method" CTA is at the very bottom of a long scrollable screen, requiring the thumb to travel past donation, GSTIN, and delivery sections.

Fix: Make the pay button sticky — always anchored at the bottom of the viewport. Show saved UPI as a one-tap option above it.

Design Principle

Distant/small targets are harder to tap

Jakob's Law

Users expect familiar, consistent patterns

Impact: Medium

Issue: Print Store has a different layout/nav than rest of Blinkit — confuses users

Fix: Standardize tab bar & layout across all Blinkit sections including Print.

Design Principle

Users expect familiar, consistent patterns

IMPROVEMENT RECOMMENDATIONS

01 Real-Time Stock Validation

Validate cart items against live inventory at add-to-cart stage. Show clear OOS badge on product grid. Prevent surprise errors at checkout.

02 Streamlined Checkout Bill

Separate bill summary from upsell/donation. Use progressive disclosure — show savings summary first, expand for details. Reduce visual clutter.

03 Smart Default Sorting

Default category pages to "Offers" or "Popular" sort. Add quick-filter chips above the grid (e.g. Under ₹50, New, Bestseller) to reduce choice paralysis.

04 Thumb-Friendly CTA Design

Increase "Add Payment Method" CTA height to 56px+. Adopt bottom-sheet pattern for payment selection. Ensure action zone is within natural thumb reach.

05 Unified Navigation & Consistency

Apply consistent tab bar and layout system across Print Store, Grocery, and all sub-sections. Follow Blinkit's main design language throughout.

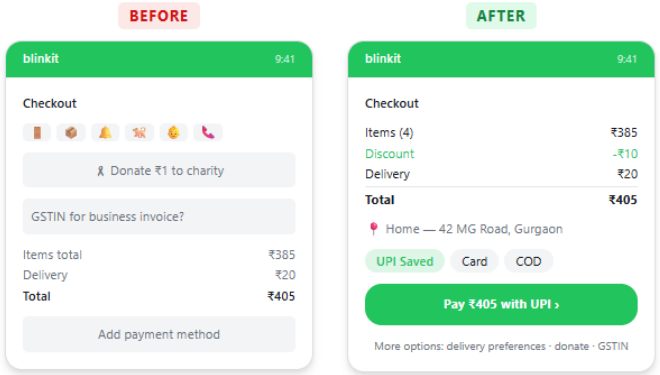

06 Post-Order Donation Flow

Move "Donate to Feeding India" to the post-order confirmation screen. Reduces cognitive load during checkout and increases donation conversion via goodwill.

Redesign Screens

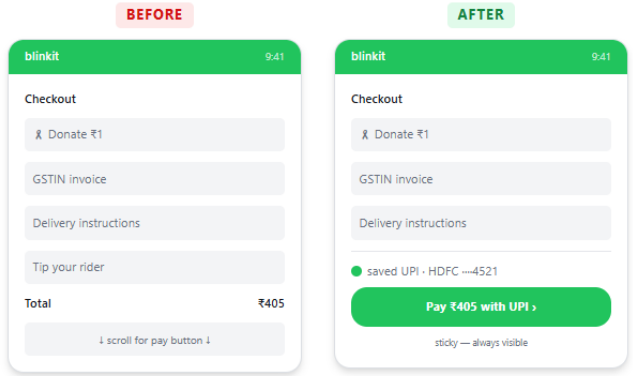

Mockup 1 — Hick's Law Fix

Reduce visible choices to essentials only

Mockup 2 — Fitts's Law Fix

Sticky CTA with one-tap UPI

Mockup 3 — Jakob's Law Fix

Surface out-of-stock on the product card
